● Experiment No.: 9

1. Title: Implement localStorage and sessionStorage to save user preferences like theme settings.

2. Software/Tools Required:

1. Visual Studio Code (VS Code)
2. Google Chrome
3. HTML5
4. JavaScript
5. CSS

3. Theory: Web Storage is a feature of HTML5 that allows web applications to store data in the browser. **localStorage** stores data permanently until it is manually deleted, making it suitable for saving user preferences such as theme settings. **sessionStorage** stores data only for the current browser session and is cleared when the browser tab is closed. JavaScript provides methods such as `setItem()`, `getItem()`, `removeItem()`, and `clear()` to manage stored data. This experiment demonstrates how to save, retrieve, and update user preferences to improve the user experience.

4. Output:

5. Result/Conclusion:

The application was successfully implemented using localStorage and sessionStorage to save user preferences. It stores and retrieves theme settings efficiently, providing a personalized experience across sessions or within the current session. The program demonstrates the effective use of browser storage APIs for client-side data management. This experiment enhances understanding of persistent and session-based data storage in JavaScript.
